

## **Guidance**

# **Coronavirus (COVID-19): implementing protective measures in education and childcare settings**

**Updated 1 June 2020**

Updates: This guidance has been updated to reflect the announcement by the Prime Minister that the government's 5 tests have been met and the decision, based on all the evidence, to move forward with wider opening of education and childcare settings.

Shielded and clinically vulnerable children and young people  
For the vast majority of children and young people, coronavirus (COVID-19) is a mild illness. Children and young people (0 to 18 years of age) who have been classed as clinically extremely vulnerable due to pre-existing medical conditions have been advised to shield. We do not expect these children to be attending school or college, and they should continue to be supported at home as much as possible. Clinically vulnerable (but not clinically extremely vulnerable) people are those considered to be at a higher risk of severe illness from coronavirus (COVID-19). A small minority of children will fall into this category, and parents should follow medical advice if their child is in this category.

### **Shielded and clinically vulnerable adults**

Clinically extremely vulnerable individuals are advised not to work outside the home. We are strongly advising people, including education staff, who are clinically extremely vulnerable (those with serious underlying health conditions which put them at very high risk of severe illness from coronavirus (COVID-19) and have been advised by their clinician or through a letter) to rigorously follow shielding measures in order to keep themselves safe. Staff in this position are advised not to attend work. Read COVID-19: guidance on shielding and protecting people defined on medical grounds as extremely vulnerable for more advice.

Clinically vulnerable individuals who are at higher risk of severe illness (for example, people with some pre-existing conditions as set out in the Staying at home and away from others (social distancing) guidance) have been advised to take extra care in observing social distancing and should work from home where possible. Education and childcare settings should endeavour to support this, for example by asking staff to support remote education, carry out lesson planning or other roles which can be done from home. If clinically vulnerable (but not clinically extremely vulnerable) individuals cannot work from home, they should be offered the safest available on-site roles, staying 2 metres away from others wherever possible, although the individual may choose to take on a role that does not allow for this distance if they prefer to do so. If they have to spend time within 2 metres of other people, settings must carefully assess and discuss with them whether this involves an acceptable level of risk.
